

Clean Version of Paragraph 3 on Page 18:

When an opaque impermeable media 124 is employed in the reusable vacuum collection bag of the present invention, as shown in FIGs. 37 and 38 a transparent window 122 can be installed to allow visual inspection of the bag's contents without opening the bag. The transparent window can be constructed of any transparent or tinted material such as cellophane, clear polyethylene or polypropylene films etc. The window is ideally located at the top of the bag so that it can be determined if the dirt tube is blocked by dirt. However, a clear window of any size on any panel is functional since it
